

# Nikita Golitsyn

Middle+ Front-end Developer

 0958140848 |  myk.holitsyn@gmail.com |  [LinkedIn](#)

---

## PROFESSIONAL SUMMARY

Middle+ Front-end Developer with 4+ years of commercial experience specializing in React. Proven track record of delivering complex features independently, maintaining strong client communication, and contributing to team success. Recognized for technical excellence, accurate estimations, and a proactive problem-solving approach.

---

## CORE COMPETENCIES

### Technical Skills:

- Frontend: JavaScript (ES6+), TypeScript, React (Hooks, HOC, Router), Redux (Thunk, Toolkit), Next.js
- UI/Styling: HTML5, CSS3, Sass, Styled Components, BEM, Responsive Design, Flexbox
- Libraries: Chart.js, Draft.js, Leaflet/Google Maps, OSRM, VROOM, jsPDF, html2canvas
- Tools: Git, npm, Webpack, Babel, ESLint, Jest, VSCode
- Methodologies: Scrum, REST API, HTTP protocol

### Soft Skills:

- Strong client communication and requirement clarification
- Proactive problem identification and solution proposals
- Accurate time estimation and deadline management
- Code review and mentorship
- Cross-functional collaboration

### Languages:

- English: B2 (Upper-Intermediate) - written and spoken
  - Ukrainian: Native
-

# PROFESSIONAL EXPERIENCE

Middle+ Front-end Developer | WeSoftYou, Kyiv | Nov 2021 - Oct 2025

## Key Responsibilities:

- Developed and maintained complex React applications with a focus on code quality and scalability
- Led technical implementation of new features with minimal supervision
- Maintained direct client communication in English, clarifying requirements and proposing solutions
- Provided accurate time estimations accounting for technical debt and potential risks
- Debugged and resolved complex technical issues across the full frontend stack
- Refactored legacy code to improve performance and maintainability
- Participated in sprint planning, daily standups, and retrospectives
- Implemented responsive designs and ensured cross-browser compatibility
- Integrated third-party services and libraries (maps, routing, analytics)

## Notable Achievements:

- **Route Planner Implementation:** Successfully integrated a complex routing system using Leaflet maps, OSRM for route building, and VROOM for optimization, including Google address geocoding
- **Old Leaflet Map Redesign:** Delivered a complete redesign of map features and tab functionality under tight deadlines, with high client satisfaction. Successfully analyzed and integrated custom Leaflet modules using vanilla JavaScript and further implemented the integration into the React application.
- **Client Satisfaction:** Consistently received 10/10 ratings for client communication and collaboration. I made a strong contribution to the implementation of new functionality. Maintained close communication with the client, conducted a thorough investigation during discussions on how the tasks should be implemented and the time required, and as a result, all deliverables were completed on time.
- **Ownership of problem-solving:** I followed the requirements outlined in the specifications, but when inaccuracies were identified, I proactively suggested improvements. Additionally, when offered the option to involve the team that had developed the previous functionality, I performed a technical assessment and decided to take ownership of the implementation themselves. This decision proved to be key to the project's success, as the client was highly satisfied with the final result.
- **Code Quality:** The code is readable and scalable. Consistently follow the established coding style and approaches defined at the early stages of the project, which helps maintain consistency and makes it easier for any new developer to onboard and quickly understand the codebase.

- **Velocity & Estimate Accuracy:** My estimates are generally accurate, and tasks are completed within the planned timeframes. I show a good understanding of the codebase, which allows me to anticipate potential risks during planning and adjust accordingly.
- **AI Tool Integration:** Improved development velocity by effectively leveraging AI tools (Claude) for faster task completion

#### **Performance Metrics (from recent review):**

- Technical Competence: 10/10
- Task Understanding & Business Value: 10/10
- Problem-solving Ownership: 10/10
- Velocity & Estimate Accuracy: 10/10
- All Soft Skills: 10/10
- All Meta Skills: 10/10

**Technologies Used:** React, React Hooks, React Hook Form, Redux, Redux Hooks, Redux Thunk, Draft.js, Chart.js, Leaflet Maps, OSRM, VROOM, jsPDF, html2canvas, Styled Components, HTML5, CSS3, Sass, BEM, REST API, Fetch, Axios, React Router DOM, Moment.js, Webpack, Babel

---

#### **Junior Front-end Developer | Softemy, Kyiv | March 2021 - Oct 2021**

- Developed React-based web applications
- Collaborated with team members using Scrum methodology
- Gained foundational experience in commercial development

---

## **EDUCATION**

**Gromcode Online University | Front-end Development | 2021**

---

## **PROFESSIONAL DEVELOPMENT GOALS**

Currently focusing on:

1. Advanced TypeScript course completion
  2. React Query implementation in pet projects
  3. Deepening expertise in modern React patterns and best practices
-

## ADDITIONAL INFORMATION

- **Work Style:** Proactive, detail-oriented, strong ownership mentality
- **Collaboration:** Experienced in Scrum environment, comfortable with remote work
- **Growth Mindset:** Consistently rated 10/10 for adaptability, responsibility, and initiative
- **Client Feedback:** Known for clear communication, professional tone, and constructive approach
